QUESTION BANK

QUESTIONS

1. Define the term 'Engineering' and its scope.

ANSWERS

Engineering is a branch of knowledge that deals with the application of scientific principles to the design and construction of man-made structures, machines, and systems. It is a multidisciplinary field that involves the use of mathematics, science, and technology to solve problems and create innovative solutions.

QUESTIONS

2. Define the term 'Design' and its importance in engineering.

Design is the process of creating a plan or drawing for a product or system. It is a critical step in the engineering process, as it determines the functionality, safety, and cost of the final product.

3. Define the term 'Manufacturing' and its role in engineering.

Manufacturing is the process of converting raw materials into finished products. It is a key component of the engineering process, as it involves the application of design principles to the production of a physical product.

4. Define the term 'Maintenance' and its importance in engineering.

Maintenance is the process of keeping a product or system in good working order. It is an essential part of the engineering process, as it ensures the reliability and safety of the product throughout its lifecycle.
